

Biocarbon, the coal that does not burn

Biocarbon is a product obtained by subjecting biomass to high temperatures in a low-oxygen or oxygen-depleted environment, which has a high organic carbon content and is very porous, light and stable. A 100% natural product, produced from biomass waste and under strict sustainability criteria. By means of a mobile kiln, we implement a forest management and harvesting mechanism.

We value forestry resources

We contribute to facilitating the establishment of the population in rural areas and ensure generational succession

We promote new management models

Climate risks addressed:

Loss of soil quality

Increased irrigation requirements

Start date: 19/12/2024

Lead partner: Associació Leader de Ponent

Collaborating entities: Ajuntament de Torrebesses, Art Verd Espai

Location: Torrebesses (Segrià)

Budget: 17.155,45 €

Action co-funded by the Climate Fund of the Government of Catalonia

Co-creating strategic action to adapt territories and the local economy to climate change
